

BRADYCARDIA (Slow Heart Rate)

BRADYCARDIA (slow heart rate) can be a red flag that the heart's electrical system isn't working as it should.

PAY ATTENTION if your heart rate is lower than **50 BEATS PER MINUTE.**

FOR SOME,
A SLOWER
HEART RATE
IS NORMAL
& no treatment
is necessary

HOW IT IS TREATED

TREAT CONDITIONS
that might play a role

ADJUST CERTAIN MEDICATIONS

Sometimes **A DEVICE (PACEMAKER)** to help a heart beat regularly is needed

If your heart beats too slowly, **YOUR BRAIN & BODY MAY NOT GET ENOUGH OXYGEN.** Then you may **EXPERIENCE:**

- Dizziness
- Fainting
- Shortness of breath
- Fatigue
- Confusion
- Difficulty exercising
- Chest pain

If you feel faint, have shortness of breath or chest pain, **CALL 911**
